Horizon™ is a versatile natural timber stepped profile. Use Horizon within a corporate, retail or home interior space to add a natural aesthetic and warmth.

Horizon™ Stepped Profile

Horizon™ profiles provide a bold, continuous & linear appearance with strong shadow lines. With a choice of four stepped profiles in varying widths & depths. You can create a multitude of different looks through a mixing and matching process.

These profiles can be intermixed with profiles of the same thickness providing an architecturally unique statement to your feature wall or ceiling. All profiles can be secret nail fixed and are suitable for both internal & external installation.

Horizon™ is the ideal feature wall and ceiling product for use in a multitude of domestic, civic and commercial applications.

- Feature walls
- Alfresco ceilings
- Music Rooms
- Home Theatres
- Retail entrance and display walls

Contrast Effect

The 'Contrast Effect' is achieved when the rebates of the profile are painted and a polyurethane clear prefinished coating is added. This is only available for Horizon™ stepped profiles.

The paint application is available in two shades, black & white.

The contrast effect provides a batten screen look in one easy process. Just install it, there is no painting, no mess, no fumes. The contrast effect is suitable for internal installation only. Refer to Tilling website for fixing instructions.
