Tilling Timber - SmartFrame Design Software - Version 14.01

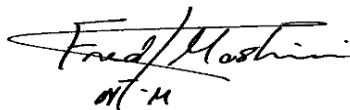

Certification of Compliance Document

We wish to certify that the Tilling Timber's Software Development Quality Assurance Manual, April 2012 has been prepared in accordance with the Australian Building Codes Board's Protocol for Structural Software Version 2011.1.

The Tilling Timber SmartFrame Design Software relates to the structural framing system of a building or structure, such as roof, wall and floor elements within the ABCB's protocol's limitations.

Tilling Timber's Software Development Quality Assurance Manual also describes the management of essential elements of the software including its scope, limitations and where necessary, any interpretation of National Construction Code reference documents. The document also states the required qualifications for the Software operators and the available training for users. In addition, there is a list of validation and quality assurance processes for the Software in accordance with this Protocol.

The period of the certification is from 1 May 2016 to 30 April 2019 or, until a new version of the software is available or ABCB's Protocol for Structural Software is published.
